Abstract:

The South African Marine Protected Areas Zonations (SAMPAZ) relates to the activities that can occur in a marine protected area. Data is collected from relevant gazettes as and when marine protected areas are zoned and the zonations are available.

Purpose:

To produce and maintain a comprehensive spatial database on the zoning of marine protected areas in South Africa.

Supplemental Information:

The SAMPAZ is a complimentary dataset to SAPAD.

Within the legislative requirements of the Spatial Data Infrastructure Act 54 of 2003, the SAMPAZ is made available in the public domain. SAMPAZ provides access to the authoritative database on marine protected zonation areas in South Africa in a spatial format.

The database contains areas under formal legislative protection. The legal statuses of these areas are audited against official gazettes before inclusion into the database.

The descriptions given in the relevant Gazettes are used to capture the geometry of the marine protected area zonations and to update the required attributes of the relational geo/database. The geometry of the marine protected zonation areas are captured from relevant gazettes where zonations apply within a marine protected area

Lineage Statement:

This SAMPAZ shapefile uses the declared marine protected area boundaries as per the SAPAD spatial data.
